Question 1

Correct

Marked out of 3.00

[Flag question](#)

Write a program that determines the name of a shape from its number of sides. Read the number of sides and print the appropriate name as part of a meaningful message. Your program should support shapes with 3 to 10 sides. If a number of sides outside of this range is entered then your program should display "The number of sides is not supported."

Sample Input 1

3

Sample Output 1

Triangle

Sample Input 2

7

Sample Output 2

Heptagon

Sample Input 3

11

Sample Output 3

The number of sides is not supported.

Answer: (penalty regime: 0 %)

```
1 #include<stdio.h>
2
3 int main()
4 {
5     int n;
6     scanf("%d", &n);
7
8     if( n == 3 )
9     {
10         printf("Triangle");
11     }
12
13     else if( n == 4 )
14     {
15         printf("Square");
16     }
17
18     else if( n == 5 )
19     {
```

REC-CIS

```
23     else if( n == 6 )
24     {
25         printf("Hexagon");
26     }
27
28     else if( n == 7 )
29     {
30         printf("Heptagon");
31     }
32
33     else if( n == 8 )
34     {
35         printf("Octagon");
36     }
37
38     else if( n == 9 )
39     {
40         printf("Nonagon");
41     }
42
43     else if( n == 10 )
44     {
45         printf("Decagon");
46     }
47
48     else
49     {
50         printf("The number of sides is not supported.");
51     }
52
```

	Input	Expected	Got
	3	Triangle	Triangle
	7	Heptagon	Heptagon
	11	The number of sides is not supported.	The number of sides is not supported.

Passed all tests!

Question 2

Correct

Marked out of
5.00[Flag question](#)

The Chinese zodiac assigns animals to years in a 12-year cycle. One 12-year cycle is shown in the table below, with 2012 being another year of the Dragon, and 1999 being another year of the Hare.

Year	Animal
2000	Dragon
2001	Snake
2002	Horse
2003	Sheep
2004	Monkey
2005	Rooster
2006	Dog
2007	Pig
2008	Rat
2009	Ox
2010	Tiger
2011	Hare

Write a program that reads a year from the user and displays the animal associated with that year. The year can be any year greater than or equal to zero, not just the ones listed in the table.

REC-CIS

2004

Sample Output 1

Monkey

Sample Input 2

2010

Sample Output 2

Tiger

Answer: (penalty regime: 0 %)

```
1  /*
2  -----
3  Rat
4  Ox
5  Tiger
6  Hare
7  Dragon
8  Snake
9  Horse
10 Sheep
11 Monkey
12 Rooster
13 Dog
14 Pig
15 -----
16 */
17
18
19 #include<stdio.h>
20
21 int main()
22 {
23     int y,z;
24     scanf("%d", &y);
25     z = ( y-4 ) % 12;
26
27     if ( z == 0 )
28     {printf("Rat");}
29
30     else if ( z == 1 )
31     {printf("Ox");}
32
33     else if ( z == 2 )
34     {printf("Tiger");}
35
36     else if ( z == 3 )
37     {printf("Hare");}
38
39     else if ( z == 4 )
40     {printf("Dragon");}
41
42     else if ( z == 5 )
43     {printf("Snake");}
44
45     else if ( z == 6 )
46     {printf("Horse");}
47
48     else if ( z == 7 )
49     {printf("Sheep");}
50
51     else if ( z == 8 )
52     {printf("Monkey");}
```

REC-CIS

	2004	Monkey	Monkey	
	2010	Tiger	Tiger	

Passed all tests!

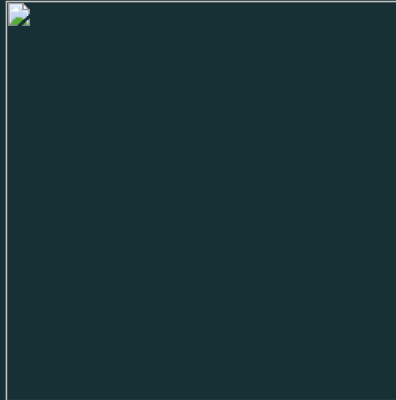

Question **3**

Correct

Marked out of 7.00

 Flag question

Positions on a chess board are identified by a letter and a number. The letter identifies the column and the number identifies the row. The color of the square is shown below:

Write a program that reads a position from the user. Use an if statement to determine if the column and row sum is even or odd. If the sum is even, the square is black. If the sum is odd, the square is white. For example, if the user enters d5 then your program should report that the square is white. The letter will always be entered. It does not need to perform any error checking.

Sample Input 1

a 1

Sample Output 1

The square is black.

Sample Input 2

d 5

Sample Output 2

The square is white.

Answer: (penalty regime: 0 %)

```
1 #include<stdio.h>
2
3 int main()
4 {
5     char l;
6     int n,p;
7     scanf("%c %d", &l,&p);
8     n = l + 1;
9
10    if ( n % 2 == 0 && p % 2 == 1 )
11    {
12        printf("The square is black.");
13    }
14
15    else if( n % 2 == 0 && p % 2 == 0 )
16    {
```

REC-CIS

```
20 {
21     printf("The square is white.");
22 }
23 else
24 {
25     printf("The square is black.");
26 }
27
28 return 0;
29
30
31 }
```

	Input	Expected	Got	
	a 1	The square is black.	The square is black.	
	d 5	The square is white.	The square is white.	

Passed all tests!
